# GREYSTONE TITLE AGENCY

#### This Week

 The median list price in GILBERT, AZ this week is \$338,450. The 966 properties have been on the market for an average of 88 days.

Inventory is tightening and days-onmarket is falling. The Market Action Index shows demand heating up. These are relatively bullish signs for prices.

### Supply and Demand

 Home sales continue to outstrip supply and the Market Action Index has been moving higher for several weeks. This is a Seller's market so watch for upward pricing pressure in the near future if the trend continues.

Median List Price	\$ 338,450	•				
Average List Price	\$ 401,317					
Asking Price Per Square I	\$ 141	1

Least expensive 25% of properties

buyer.

#### **Median Price**

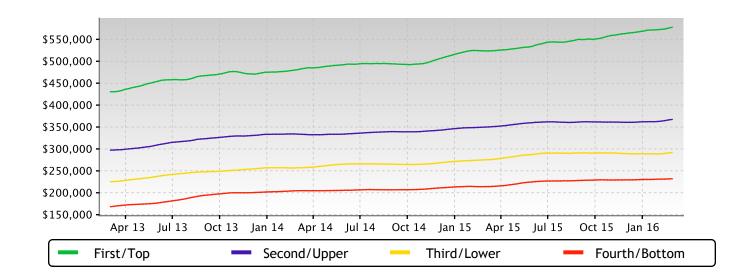

CITY OVERVIEW

Prices are climbing and we're nearing the market's all time high so watch the Market Action Index as an indicator of how long this trend will last.

## **Quartile Prices**

Prices have settled at a price plateau across the board. Prices in all four quartiles are basically mixed. Look for a persistent shift (up or down) in the Market Action Index before prices move from these current levels.

#### Price per Square Foot

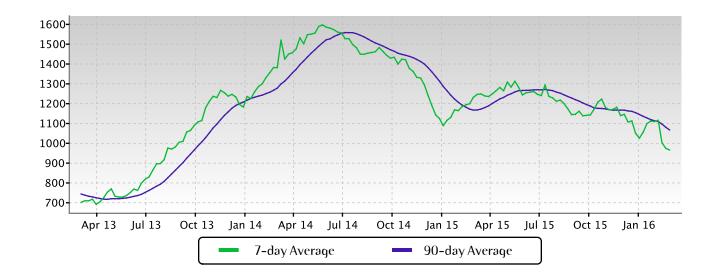

CITY OVERVIEW

The price per square foot is increasing fairly consistently recently despite the fact that overall price trends haven't shown a consistent upwardly push. This can imply that investment conditions are opportunistic. Watch the Remodel Index for a more detailed analysis of the investment opportunity in the area.

# Inventory of Properties Listed for Sale

Inventory has been falling in recent weeks. Note that declining inventory alone does not signal a strengthening market. Look to the Market Action Index and Days on Market trends to gauge whether buyer interest is changing with the available supply.

#### **Market Action Index**

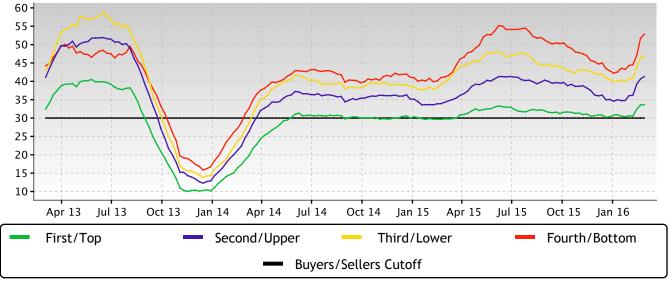

CITY OVERVIEW

The GILBERT market is currently in the Seller's Advantage zone (greater than 30). The 90-day Market Action Index stands at 39.07 which indicates that demand is strong and available supply of homes gets snapped up relatively quickly.

#### Market Action Index per Quartile

Not surprisingly, all segments in the market are showing high levels of demand. Watch the quartiles for changes before the whole market changes. Often one end of the market (e.g. the high-end) will weaken before the rest of the market and signal a slowdown for the whole group.

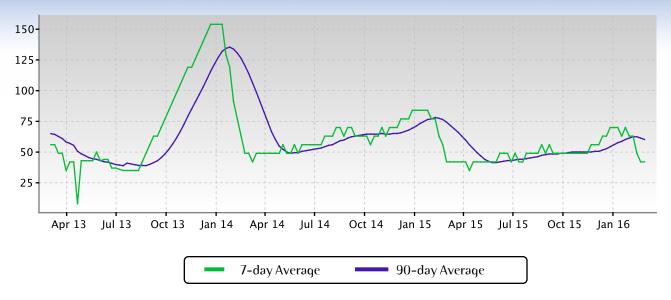

Residential house prices are a function of supply and demand, and market conditions can be characterized by analyzing those factors. Watch this index for sustained changes: if the index falls into the Buyer's Advantage zone (below 30) for a long period, prices are likely in for a downward correction.

#### Days on Market

CITY OVERVIEW

The properties have been on the market for an average of 88 days. Half of the listings have come newly on the market in the past 42 or so days.

#### Days on Market per Quartile

It is not uncommon for the higher priced homes in an area to take longer to sell than those in the lower quartiles.
