GREYSTONE TITLE AGENCY

CHANDLER, AZ

This Week

 The median list price in CHANDLER, AZ this week is \$349,000. The 1109 properties have been on the market for an average of 92 days.

Inventory has been lightening lately and the Market Action Index has been trending up. These are mildly positive indications for the market.

Supply and Demand

 Home sales continue to outstrip supply and the Market Action Index has been moving higher for several weeks. This is a Seller's market so watch for upward pricing pressure in the near future if the trend continues.

Median List Price	\$ 349,000	•	
Average List Price	\$ 408,068

Least expensive 25% of properties

Median Price

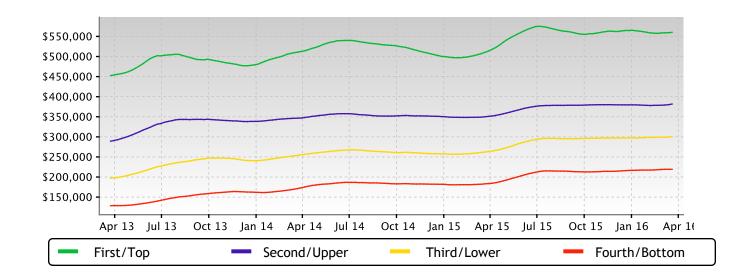

CITY OVERVIEW

 Prices have been hovering around the market's high point. Look for a persistent down-shift in the Market Action Index before we see prices deviate from these levels.

Quartile Prices

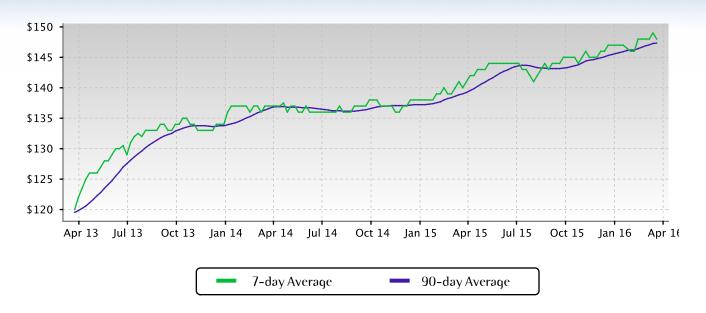

• Prices have settled at a price plateau across the board. Prices in all four quartiles are basically mixed. Look for a persistent shift (up or down) in the Market Action Index before prices move from these current levels.

Price per Square Foot

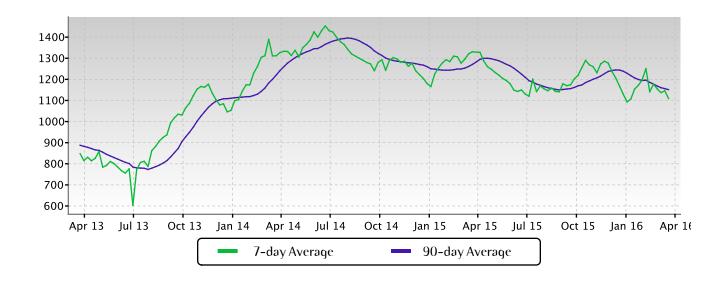

CITY OVERVIEW

The market plateau is seen across the price and value. The price per square foot and median list price have both been reasonably stagnant. Watch the Market Action Index for persistent changes as a leading indicator before the market moves from these levels.

Inventory of Properties Listed for Sale

Inventory has been falling in recent weeks. Note that declining inventory alone does not signal a strengthening market. Look to the Market Action Index and Days on Market trends to gauge whether buyer interest is changing with the available supply.

Market Action Index

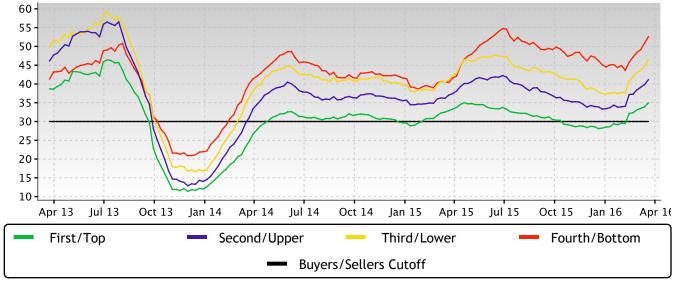

CITY OVERVIEW

The CHANDLER market is currently in the Seller's Advantage zone (greater than 30). The 90-day Market Action Index stands at 38.84 which indicates that demand is strong and available supply of homes gets snapped up relatively quickly.

Market Action Index per Quartile

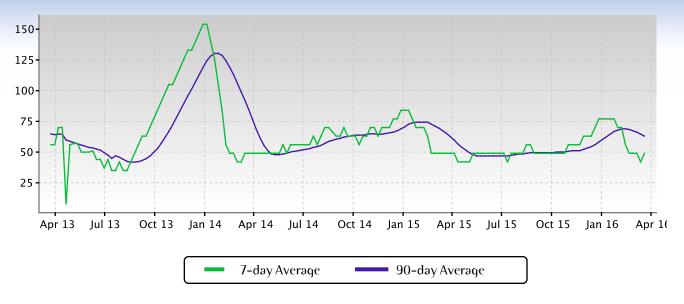

Not surprisingly, all segments in the market are showing high levels of demand. Watch the quartiles for changes before the whole market changes. Often one end of the market (e.g. the high-end) will weaken before the rest of the market and signal a slowdown for the whole group.

Residential house prices are a function of supply and demand, and market conditions can be characterized by analyzing those factors. Watch this index for sustained changes: if the index falls into the Buyer's Advantage zone (below 30) for a long period, prices are likely in for a downward correction.

Days on Market

The properties have been on the market for an average of 92 days. Half of the listings have come newly on the market in the past 49 or so days.

Days on Market per Quartile

It is not uncommon for the higher priced homes in an area to take longer to sell than those in the lower quartiles.
